

The app says my system clock/timezone is off

Open up your system clock settings (Google if you're not sure how) and set the time and date correctly. You can search Google for "what time is it" to figure out your timezone and the current time and date. Then, restart the app and try again. If it's still not working, go find somebody to tell you what time /day it is, and what timezone you're in, cause you did it wrong.
