

# How can I accomplish X, Y, and Z with less mouse clicks / interaction?

If you're talking about posting and canceling, Auctioning can make a macro for you and bind it to your scroll wheel for super-speed posting and canceling once the scan is complete. This can be found in the main TSM Features window under 'Macro Setup' after typing /tsm or clicking your minimap button. If you're talking about something else, typing /fstack in game will bring up a window that'll show the names of whatever you're hovering your mouse over. If you hover over a button that has a name, you should see it. If you don't see anything that's an obvious button name, chances are that button can't be macro'd. To macro a button that does have a name, create a macro and enter '/click BTN\_NAME' (obviously replace BTN\_NAME as applicable and don't put the quotes).
